

NET Survey

A click of the mouse and your questionnaires are available on the Internet

NET Survey is an exceptional tool which designs a simple or complex questionnaire and transforms it into HTML format for diffusion by an Internet or Intranet server.

Assisted questionnaire design

- Entry of all types of questions: single or multiple response (dropdown list or tickboxes), numerical, date, time, free text...
- Contextual response lists: for instance, a list of subsidiaries according to a selected country, or a list of functions according to a chosen department.
- Dynamic control of responses entered: compulsory questions, handling of conditional branching from page to page, prevention of questions according to responses already given...
- Customizable questions: dynamic insertion of the addressee's name or characteristics, recall of a response to a prior question...
- Insertion of objects: separation lines, images, navigation toolbars, automatic summaries, page skips...

Automatic form generation

- Automatic generation of a ready-to-broadcast HTML form, directly from the list of questions.
- Option of complete customization of the proposed form: management of colors, fonts, positions and formats of different elements.
- Option of applying a graphic setup to the form, consisting of predefined models; insertion of the form within a set of frames.
- Global modification of default question/answer formats, handling of styles...
- Addition of external elements: insertion of GIF or JPEG images (including the handling of image tables), addition of explanatory texts, existing HTML files...
- Option of injecting answer areas within an external HTML model (for complex tables, flowchart presentations...).

Questionnaire broadcasting

- Management of a correspondent database created or imported from an external file (Excel, Dbase, Text...).
- Individual passwords for each operation.
- Automatic installation of the questionnaire onto a chosen remote site, via FTP.
- Mailing of the form or of a message indicating an address where the questionnaire can be accessed; option of individual or grouped mailing, with a customized message indicating an individual user-name and password for each addressee.
- Automatic programmable retrieval of responses (in Ethnos format) via ftp or http; reception by mail and automatic consolidation of responses to questionnaires initially sent by mail.
